

## PERFORMANCE

### Power Train

#### Engine

- The 1AZ-FE and 2AZ-FE engines have been carried over from the previous model. These engines realize high performance, quietness, fuel economy, and clean emissions through the use of the VVT-i (Variable Valve Timing-intelligent) system, DIS (Direct Ignition System), and ETCS-i (Electronic Throttle Control System-intelligent).

► 2AZ-FE Engine ◀

- A new, 2AD-FTV Toyota D-4D (direct injection, 4-stroke common-rail diesel), turbocharged, intercooler diesel engine is used. This engine realizes high performance, clean emissions, low noise, and low vibration through the use of a direct injection system and a common-rail system.
- A new 2AD-FHV engine, which offers higher performance over the 2AD-FTV engine and provides an additional D-CAT (Diesel Clean Advanced Technology), is used.

### **Transaxle**

- A new EA64F 6-speed manual transaxle is used with the 2AD-FTV and 2AD-FHV engines.
- A new E352 5-speed manual transaxle and U241E 4-speed automatic transaxle are used on the 2WD models.
- The E352F and E359F 5-speed manual transaxles and the U140F 4-speed automatic transaxle are carried over from the previous model.
- A new GF1A transfer is used.

### **Active Torque Control 4WD System**

- A new active torque control 4WD system with an electric control coupling is used.
- The active torque control 4WD system, which has an electric control coupling that is in the front part of the rear differential, transmits torque to the rear wheels when needed, and only in the amount needed, based on information provided by various sensors.
- By operating the four-wheel drive lock switch provided on the instrument panel, the driver can select the following modes: the AUTO mode to optimally control the torque that is transmitted to the rear wheels, and the LOCK mode that locks the torque that is transmitted to the rear wheels to the maximum amount.
