### High Efficiencies Across a Broad Range of Operating Conditions

PVI-3.0, PVI-3.6, and PVI-4.2 inverters work with nominal output voltage, at up to 96.8% efficiency (CEC 96%). The graph to the right demonstrates the high efficiencies, across a continuous range of input voltages and load conditions, for the PVI-4.2.

The graphs below depict the industry-leading performance of all models at three discrete MPPT-voltage reference points, and a continuous range of load conditions.
